

Data Modelling and Form Design

Aim

To design and develop a **Patient Appointment Booking Form** using Zoho Creator by creating a structured form, applying appropriate validations, and generating a report for managing patient appointments.

Theory

Patient appointment booking and form design involve organizing patient information into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as **Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox**.

In this experiment, a **Patient Appointment Booking Form** is designed to collect patient details, contact information, medical details, preferred department, symptoms, appointment schedule, and treatment consent. The form is divided into four sections: **Patient Details, Contact Details, Medical Details, and Scheduling & Consent**.

Validations are applied to ensure accurate data entry, including mandatory fields, valid email and phone formats, age range validation, prevention of past appointment dates, and compulsory treatment consent. The submitted data is displayed in the **Appointment_Booking_Report** for review and appointment scheduling.

Procedure

1. Open Zoho Creator and create the **Patient Appointment & Scheduling Management** application.
2. Create the **Appointment_Booking_Form**.
3. Add the required fields for patient, contact, medical, scheduling, and consent details.
4. Organize the fields into the four specified sections.
5. Configure mandatory fields and apply the required validation rules.
6. Save and preview the form.
7. Enter sample patient details and submit the form.
8. Create the **Appointment_Booking_Report** and verify the submitted records.
9. Filter the records based on **Department** and **Preferred Appointment Date** for appointment scheduling.
10. Configure an automated confirmation email to the patient after successful submission.

Result

The **Patient Appointment Booking Form** was successfully created in Zoho Creator with a structured data model, appropriate field validations, and organized sections. The submitted appointment details were successfully stored and displayed in the **Appointment_Booking_Report** for effective review and scheduling.
